Project Name	OptiCrop – Smart Agricultural Production Optimization Engine
Maximum Marks	4 Marks

Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

SAYS • “I just want to know which crop will give me the best yield this season.” • “I don't fully understand what all these soil test numbers mean.” • “I can't afford to waste money on the wrong crop.”	THINKS • Will this recommendation actually work for my specific field? • I hope this saves me time compared to guessing or asking around. • Can I trust a computer system with a decision this important?
PERSONA NAME <i>Rakesh – Small/Marginal Farmer (Primary End User)</i>	
DOES • Tests soil for N, P, K and pH levels before sowing • Checks local weather and rainfall forecasts • Enters soil and climate values into the OptiCrop tool to get a recommendation	FEELS • Uncertain about making the right crop choice • Relieved when given a clear, data-backed recommendation • Hopeful about improving yield and reducing resource waste
